

The GAPS Study

Gait and Posture Study

Motor Development of Pre-Schoolers

Researchers at CliniKids and Curtin University are looking for children aged 3-5 years old with and without autism to participate in a short study looking at motor skills.

Can my child participate?

Your child is eligible to participate in this study if:

1. They are aged between 3-5 years of age
2. They have a diagnosis of autism **OR**
3. They do not have a diagnosis of autism or any other developmental concerns

What is involved?

If you choose to participate, you will be asked to attend a short (approximately 30 minutes) session at CliniKids, a new clinical service of the Telethon Kids Institute. We will do some activities with your child including asking them to stand and walk. Parents will also be required to complete a short 5 to 10 minute survey about their child.
